

Context Craft Checkpoint Set

Chapter-by-chapter checkpoint pages for the PDF onboarding edition of *Context Craft — The Last Human Skill*. Twelve checkpoints across five stages, each tied to a real ARK Platform action.

The ramp moves the reader from **diagnosis** → **confrontation** → **practice** → **navigation** → **proof of growth**. Each checkpoint converts one chapter's idea into one concrete platform action and one number written in the reader's own hand. By the end, the reader holds a longitudinal record of their own ARK trajectory.

How to Use This Document

This set contains **twelve checkpoint pages** plus a closing **Your Numbers Ledger** appendix. They are designed to be placed after the corresponding chapter in the final PDF layout.

Chapter titles below are **working titles** mapped to the thematic concepts the Prologue introduces. Rename them freely to match your final chapter list — the checkpoint structure does not depend on the title, only on the concept the chapter teaches.

The ramp has five stages. Each stage opens with a divider page that tells the reader what they're about to do and why this stage exists.

STAGE	CHAPTERS	WHAT THE READER DOES
1 · Diagnose	Ch 1-3	Take an unflinching look. Upload, score, classify.
2 · Confront	Ch 4-5	Sit with the result. Decide which professional they are becoming.
3 · Practice	Ch 6-8	Build the survival skill through the game loop. Earn the first cert tier.
4 · Navigate	Ch 9-11	Map where they could go next. Commit to a 30/90/365 discipline.
5 · Prove	Ch 12	Compare the score they captured in Checkpoint 1 to the one they hold now.

Within each checkpoint the six-block anatomy from the Design Guide is preserved: **Concept Recall, Self-Scan, The Platform Step, Your Number to Capture, Reflection Prompt, What's Coming**. One page per checkpoint. Same shape every time.

Stage 1 · Diagnose

Chapters 1 through 3 · The unflinching look

Three chapters. Three numbers. By the end of this stage the reader knows exactly where they stand in the AI economy — and they have written the proof of it in pen. Everything that comes after is a response to what they find here.

The stage is deliberately short and deliberately uncomfortable. David Martinez did not get to skip his annual review. Neither does the reader.

Checkpoint 1

After Chapter 1 — The JST Index (working title)

Concept Recall (write your answers in the margin)

1. What do the three letters in JST stand for, and which layer is owned by *you* vs. by your *employer*?
2. Why is the Jobs layer the most dangerous place to be spending most of your professional hours?
3. The chapter described JST as "*the most honest assessment your career has ever received.*" What does that mean for someone whose previous reviews were always positive?

Self-Scan

Look at last week's calendar. Count the hours you spent on Jobs-layer tasks — routine, pattern-matching, predictable. Write the number here: _____. Be honest. The number doesn't go anywhere.

The Platform Step → arkplatform.app/upload [QR code]

Upload your resume — PDF or pasted text, under 10 MB. The platform will run a five-phase analysis and surface your JST Index, your Vulnerability Level, and your primary Archetype. This is the moment David Martinez had at the top of the Prologue. It is yours now.

Your Number to Capture

My JST Index: ____ / 300 Sub-scores J: ____ S: ____ T: ____
Date captured: _____

Reflection Prompt

The chapter said "*these numbers don't lie.*" When you saw yours, did you agree, disagree, or feel something more complicated? Write one paragraph. Date it.

What's Coming

In Chapter 2 we open the second envelope — the one that tells you how exposed your specific work is to automation. Bring your JST score with you.

Checkpoint 2

After Chapter 2 — AI Vulnerability: Where Your Job Sits (working title)

Concept Recall

1. What is the difference between a *role* being vulnerable and a *person* being vulnerable?
2. Vulnerability Level 0 and Level 4 represent the two extremes. In your own words, who lives at each end?
3. The chapter argued that vulnerability is not a verdict but a starting position. Why does the framing matter?

Self-Scan

Name one task you do every week that you suspect would score high vulnerability.
Name one task you do every week that you suspect would score low. Write both here:
_____ / _____.

The Platform Step → arkplatform.app/dashboard [QR code]

Open the Intelligence Hub. Find the Vulnerability Meter. Read your level (0–4), then scroll to the Task Heatmap below it — the per-task automation potential map built from your resume. Spend two minutes on the heatmap. Look at which of your tasks burn red.

Your Number to Capture

Vulnerability Level: ____ / 4 Automation risk %: ____
Two tasks that burned reddest on the heatmap:
1. _____
2. _____

Reflection Prompt

If you stopped doing the two reddest tasks tomorrow, what would actually happen to your week? Be specific.

What's Coming

In Chapter 3 we ask the question the JST and Vulnerability scores cannot answer alone: which *kind* of professional are you becoming? Architect, Orchestrator, or Conductor.

Checkpoint 3

After Chapter 3 — The Archetype You Don't Know You Are (working title)

Concept Recall

1. Briefly describe each of the three archetypes — Architect, Orchestrator, Conductor — in one line apiece.
2. Why does the chapter insist that archetype is not destiny?
3. What is the difference between your *primary* archetype and your *composite vector*?

Self-Scan

Before you look at the platform: which archetype do you believe you are? Write your guess here: _____. (You will compare it to the score in a moment.)

The Platform Step → arkplatform.app/dashboard [QR code]

On the Intelligence Hub, scroll to the Archetype Handicap card. Read your primary archetype and the three weighted signals (job titles, skill categories, FORGE cards) that produced it. The numbers do not flatter — they describe.

Your Number to Capture

My Archetype (platform-assigned): _____
My guess before checking: _____
Composite vector: Architect ____% Orchestrator ____% Conductor ____%

Reflection Prompt

Did the platform agree with your guess? If not, where do you think the gap is — in how you describe your work, or in how you understand yourself?

What's Coming

Stage 1 is now complete. You have three numbers. In Stage 2 we stop measuring and start choosing. Which of the three professionals from the Prologue — Bronze, Foil, Bronze+Foil — are you becoming?

Stage 2 · Confront

Chapters 4 through 5 · Sit with the result

Most readers will want to skip from diagnosis straight to practice. This stage exists to stop them. Two chapters. No new numbers. Just an honest reckoning with what the first three numbers mean, and one quiet act of commitment to where the reader wants to be standing in twelve months.

Checkpoint 4

After Chapter 4 — Bronze, Foil, and the Third Path (working title)

Concept Recall

1. What does the Bronze statue represent? What does the foil-wrapped clay represent?
2. The chapter named three end-state professionals: H, AI, and HUMAN+AI. Describe each in one sentence.
3. Why is the danger *not* that foil replaces bronze, but that *the employer cannot tell the difference*?

Self-Scan

Look at your last three completed pieces of work. For each, mark whether you would describe it as bronze (your judgment, intuition, mastery), foil (something an AI could have produced), or bronze+foil (your judgment amplified by AI). Write three letters here: — — —.

The Platform Step → arkplatform.app/dashboard [QR code]

Find the LHCS Signal on the Intelligence Hub — the three-light readiness panel (CPR / MPS / LCIS). Note the colour of each light and the composite status (BASELINE / DEVELOPING / ACTIVE). LHCS is the platform's measure of how *ready* you are to become a HUMAN+AI professional. It does not tell you who you are. It tells you what shape you are in.

Your Number to Capture

CPR:	___ / 100	(	☐ green	☐ amber	☐ red	)
MPS:	___ / 100	(	☐ green	☐ amber	☐ red	)
LCIS:	___ / 100	(	☐ green	☐ amber	☐ red	)
Composite status:	_____					

Reflection Prompt

Which of the three end-state professionals — H, AI, HUMAN+AI — do you *want* to be in twelve months? Write the answer here, in pen: _____. This is the only commitment the book will ask you to make.

What's Coming

In Chapter 5 we look at the seven internal capabilities that determine whether the commitment you just made is realistic — the CCMI pillars.

Checkpoint 5

After Chapter 5 — The Seven Pillars Inside You (working title)

Concept Recall

1. Name as many of the seven CCMI pillars as you can recall, without looking back at the chapter. Write your list here: _____.
2. Why does the framework call them *pillars* rather than *skills*?
3. The chapter introduced the idea that CCMI is **earned, not measured**. What does that mean for someone reading the book on day one?

Self-Scan

Of the seven pillars, which one do you suspect is your strongest? Which one is your weakest? Write both: strongest _____ / weakest _____.

The Platform Step → arkplatform.app/dashboard [QR code]

Find the CCMI Pillars radar on the Intelligence Hub. If most pillars read as zero, that is not an error — CCMI accumulates from engagement, not from your resume. You are at the starting line. Take a screenshot if you want a memento of day one.

Your Number to Capture

My CCMI score on day one: ____ / 300

Top pillar (if any): _____

The pillar I most want to grow: _____

Reflection Prompt

You committed in Checkpoint 4 to a future professional. Which two pillars matter most for becoming that person? Write them here. They are the ones you will work hardest on in Stage 3.

What's Coming

The diagnosis is done. The reckoning is done. In Stage 3 we put down the book and pick up the game. Context Craft is a skill. Skills are practised.

Stage 3 · Practice

Chapters 6 through 8 · Build the survival skill

Three chapters and three real sessions of play. This is the stage where the book starts to *cost something* — your time. The platform's game loop (CCGE) is the engine for everything that follows; the cert tiers earned here become the multiplier on every score that comes after.

The rule for this stage: read the chapter, then play. Not the other way around. The book teaches the principle; the game teaches the reflex.

Checkpoint 6

After Chapter 6 — Context Craft, the Survival Skill (working title)

Concept Recall

1. What is the difference between *prompting* and *Context Crafting* as the chapter defines them?
2. The KCSE rubric grades four dimensions of a played hand. Name them.
3. Why is *Specificity* weighted lower than *Knowledge* and *Clarity*?

Self-Scan

Think of a prompt you wrote in the last week. Score it yourself, gut-feel, out of 50 on the KCSE rubric: K ___ + C ___ + S ___ + E ___ = ___. You will compare this to a real KCSE score in a moment.

The Platform Step → arkplatform.app/play [QR code]

Start one CCGE session. Bronze tier is fine — the point is to play it through, not to win it. You will be dealt five cards against a scenario. Choose your hand, finish the session, and read the platform's grading. Do not skip the breakdown.

Your Number to Capture

My first KCSE score: _____ / 50
K ___ C ___ S ___ E ___
My gut-feel guess above: _____ / 50
Tier earned: ● Bronze ● Silver ● Gold ● Platinum

Reflection Prompt

Was the platform harder on you than you were on yourself, or easier? What does the gap tell you about how you have been judging your own prompts up to now?

What's Coming

In Chapter 7 we open the rubric. KCSE is not a score, it is four scores. Each one points at a different muscle to train.

Checkpoint 7

After Chapter 7 — Pillar Coverage and the Practice Loop (working title)

Concept Recall

1. What does *pillar coverage* mean in a CCGE hand?
2. Why does *unique* pillar coverage score higher than repeated coverage?
3. The chapter argued that Efficiency is the hardest dimension to game. Why?

Self-Scan

Play two more sessions before answering this. Then look at all three of your KCSE breakdowns. Which dimension is consistently your weakest? Write it here: _____.

The Platform Step → arkplatform.app/play [QR code]

Play two further sessions. After each one, read the per-dimension breakdown and the pillar-coverage diagnostic. Do not chase a higher overall score — chase a *higher score on the one weak dimension* you identified above.

Your Number to Capture

Session 2 KCSE: ____ / 50 (☐ Bronze ☐ Silver ☐ Gold ☐ Platinum)
Session 3 KCSE: ____ / 50 (☐ Bronze ☐ Silver ☐ Gold ☐ Platinum)
My weakest dimension across all three: _____

Reflection Prompt

Targeting one weakness directly — did your weakest dimension actually improve between session 1 and session 3? If yes, congratulations: you have proof that Context Craft is trainable. If no, what stopped it from improving?

What's Coming

In Chapter 8 we leave practice mode and enter the certification ladder. The first tier — Bronze — is not a trophy. It is the floor of professional competence in the AI economy.

Checkpoint 8

After Chapter 8 — Earning Your Tier, Bronze to Platinum (working title)

Concept Recall

1. What are the five Context Craft certification tiers, in order?
2. The chapter described the JST multiplier as *"the mathematical case for practice."* What is the multiplier at NONE, at Bronze, at Gold, at Platinum?
3. Why does the framework refuse to award certification from anything other than the flywheel?

Self-Scan

Calculate, in your head, what your JST Index from Checkpoint 1 would become if you held a Gold certification. Write it here: $\text{___} \times 1.35 = \text{___}$.

The Platform Step → arkplatform.app/context-craft [QR code]

Open the Context Craft page. Read where your current cert tier sits on the ladder, and the JST-multiplier preview for the next tier up. Then play sessions until you earn at least one tier upgrade. This may take ten minutes. It may take a week. Both are fine.

Your Number to Capture

Cert tier on day one (from Checkpoint 1):	_____
Cert tier now:	_____
Current JST multiplier:	_____ ×
Updated JST Index (raw × multiplier):	_____ / 300

Reflection Prompt

In Checkpoint 1 you wrote down a JST Index. The new one above is its *practised* form. How does it feel to have moved the needle yourself, with no employer involved?

What's Coming

Stage 3 is complete. You have done the practice. In Stage 4 we look up from the game and out at the map — where your practised skill could take you next.

Stage 4 · Navigate

Chapters 9 through 11 · Map where you could go

Practice without direction is exercise. The next three chapters give the reader the map. By the end of Stage 4 the reader has a written, dated 30-day commitment that the rest of the book will hold them to.

Checkpoint 9

After Chapter 9 — The 12-Vector Radar (working title)

Concept Recall

1. What does the 12-Vector Transferability Radar measure?
2. Why is mobility along the radar a *function of archetype*, not effort?
3. The chapter argued that some skills are transferable but *invisible* until plotted. Give one example from your own work.

Self-Scan

Without looking yet, write the *three* roles you have privately considered moving toward in the last twelve months: 1. _____ 2. _____ 3. _____.

The Platform Step → arkplatform.app/pathways [QR code]

Open Career Mobility. Read the 12-Vector Radar plotted from your assessment. Hover the vectors that score highest — those are the directions your practised skill set already wants to move.

Your Number to Capture

```
My three strongest transferability vectors:
1. _____ / 100
2. _____ / 100
3. _____ / 100
My weakest vector (the closed door):
_____ / 100
```

Reflection Prompt

Of the three roles you wrote in the Self-Scan, how many overlap with your three strongest vectors? Where the platform disagrees with your private list — who do you trust, and why?

What's Coming

In Chapter 10 we narrow the radar to three named pivot opportunities. This is where the book stops talking about *possibility* and starts talking about *decision*.

Checkpoint 10

After Chapter 10 — Pivots Worth Making (working title)

Concept Recall

1. What three filters does the chapter use to separate a *pivot worth making* from a *pivot worth fantasising about*?
2. Why does the chapter recommend choosing the *second* pivot opportunity over the first?
3. What is the Skill Gap Matrix and what does it stop you from doing?

Self-Scan

Of your three top transferability vectors from Checkpoint 9, which one scares you most? Write it here: _____. The chapter has a particular view on which vector to chase. Hold this answer; you will compare it.

The Platform Step → arkplatform.app/pathways [QR code]

Scroll to Pivot Opportunities. Read all three — title, fit, time horizon, skill gap. Open the Skill Gap Matrix beneath them. The matrix is colour-coded; the red cells are what you would have to build.

Your Number to Capture

Pivot Opportunity #1: _____
Pivot Opportunity #2: _____
Pivot Opportunity #3: _____
The one I am choosing: _____
The single largest red cell I would have to close: _____

Reflection Prompt

Why this pivot and not the other two? Write three sentences. Date them. You will be held to this in Chapter 12.

What's Coming

In Chapter 11 we put a clock on the choice you just made. Thirty days. Ninety days. One year.

Checkpoint 11

After Chapter 11 — The 30/90/365 Discipline (working title)

Concept Recall

1. Why does the framework use three horizons — 30, 90, 365 — instead of one?
2. The chapter argued that the 30-day item should *not* be the most important one. Why?
3. What is the rule for what counts as a *closed* 30-day item?

Self-Scan

Before you look at the platform: write down what you privately think your next 30 days should contain, given the pivot you chose in Checkpoint 10. One sentence: _____.

The Platform Step → arkplatform.app/pathways [QR code]

Open the Upskilling Timeline. Read your 30-day, 90-day, and 365-day items as the platform has computed them. Compare the 30-day item to what you wrote in the Self-Scan. Where they disagree, the platform is usually working from your skill-gap matrix, not your ambition.

Your Number to Capture

My 30-day commitment: _____
Due by: _____
My 90-day commitment: _____
My 365-day commitment: _____

Reflection Prompt

Tear a small piece of paper from this page. Write "*30-day commitment: _____*" on it and put it where you will see it every morning for the next month. This is the only physical artefact the book will ask you to make.

What's Coming

Stage 4 is complete. The map is drawn, the clock is set. In Stage 5 — the final chapter — we return to the number you wrote in Checkpoint 1 and ask the question the whole book has been building toward.

Stage 5 · Prove

Chapter 12 · The long game

One chapter. One checkpoint. One side-by-side comparison: the JST Index the reader wrote on day one versus the ARK Score they hold today. This stage exists for one reason — to give the reader incontrovertible written evidence, in their own hand, that the work moved the needle.

Checkpoint 12

After Chapter 12 — Proof of Growth: The Long Game (working title)

Concept Recall

1. What is the relationship between JST, CCMI, and the composite ARK Score?
2. The chapter said *"the only honest measurement is over time."* What does that mean for someone reading this on day one?
3. Why does the framework cap flywheel gains at +15 ARK/day and +20 ARK/30d?

Self-Scan

Turn back to Checkpoint 1. Write your starting JST Index here: ____ / 300. Turn back to Checkpoint 5. Write your starting CCMI here: ____ / 300. Add them. Your starting ARK was: ____ / 600.

The Platform Step → arkplatform.app/ark/history [QR code]

Open the Score Trajectory page. Look at the area chart. Read your current ARK Score and the events that produced the lifts. The chart is your story, told in numbers.

Your Number to Capture

```
Starting ARK Score (from above):    ____ / 600
ARK Score today:                    ____ / 600
Delta:                             + ____
My top CCMI pillar today:            _____
Date captured:                      _____
```

Reflection Prompt

Look at the delta. Whatever its size, you produced it. Write one paragraph to the version of you who first opened this book at Checkpoint 1. Tell that person what was worth doing and what was not. Date it. Sign it.

What's Coming

Nothing. The book ends here. Turn the page for your Ledger.

Appendix · Your Numbers Ledger

One page. Every number you captured, in one place. By the time this page is full, you hold a longitudinal record of your own ARK trajectory written in your own hand.

YOUR CONTEXT CRAFT NUMBERS LEDGER			
STAGE 1 · DIAGNOSE			
Cp 1	JST Index	____ / 300	Date _____
	J: ____ S: ____ T: ____		
Cp 2	Vulnerability Level	____ / 4	Risk % ____
Cp 3	Archetype	_____	
	Composite: A ____% O ____% C ____%		
STAGE 2 · CONFRONT			
Cp 4	LHCS CPR ____ MPS ____	LCIS ____	Status _____
	Future commitment:	☐ H ☐ AI ☐ HUMAN+AI	
Cp 5	CCMI day one:	____ / 300	
	Strongest pillar:	_____	
STAGE 3 · PRACTICE

	365-day commitment:	_____	
STAGE 5 · PROVE			
Cp 12	Starting ARK	____ / 600	
	ARK today	____ / 600	

Delta + _____
Date captured _____

This page is the proof. Photograph it. Frame it. Hand it to the next sceptic who says practice doesn't move the needle.

Editorial notes

- **Chapter titles** above are *working titles* mapped to the Prologue's introduced concepts. Replace them with the manuscript's actual chapter titles before final layout — no structural change is needed.
- **QR codes** are flagged with **[QR code]** placeholders. Generate one per checkpoint pointing at the route named in that checkpoint's Platform Step.
- **Stage divider pages** (the four "Stage N" pages) can be designed as half-page openers if a full page feels heavy; the ramp narrative still reads cleanly either way.
- **Cadence option.** If chapters run dense (50+ pages), the Design Guide's quarter-page *Pulse Check* callouts are recommended at mid-chapter to keep recall alive. None are included here; add them where your chapter length demands.
- **Honesty rule kept.** No checkpoint promises a platform surface that does not ship today. CCMI baseline on day one is honestly framed as *"most pillars read as zero, that is not an error"* (Checkpoint 5). The pivot text in Checkpoint 10 reflects template-by-archetype recommendations, not bespoke pivots.
