

ATLAS PromptWare Design Document

ARK Platform — Advanced Resume & Karriere Synthesized Intelligence

Attribute	Value
PDD ID	PDD-ARK-PLATFORM-2026-001
Version	1.0 (reverse-engineered from production codebase, May 2026)
Authored By	ATLAS ULTRA SI (per <code>.local/dev-team/ATLAS.md</code>)
Source Inputs	<code>replit.md</code> · <code>threat_model.md</code> · live codebase (7,410 LOC server-side) · <code>shared/schema.ts::SCORE_GLOSSARY</code>
FORGE Tier Target	Gold (JCSE ≥ 43)
Cognitive Architecture	4-Part ATLAS Standard

PART 1 — SINGLE-PAGE CHEAT SHEET

All stakeholders · scan in 60 seconds

What it is: A full-stack AI-powered career intelligence platform that scores any worker on the JST Index (Jobs·Skills·Talent, 0–300), measures their Context Craft Mastery (CCMI 0–300), composites the two into a single ARK score (0–600), and gamifies improvement via a card-based CCGE engine, a peer SPHINX marketplace, and an institutional cohort system.

Who it's for: Individual professionals (assessment + upskilling), enterprises (workforce intelligence), instructors (cohort gradebooks), and prompt creators (marketplace).

Critical numbers:

- $ARK = JST + CCMI$ (0–600)
- $JST = (Jobs \cdot 0.30 + Skills \cdot 0.40 + Talent \cdot 0.30) \cdot 3$
- $CCMI = \text{weighted P1-P7 sum} \cdot 3$
- JCSE tier breakpoints: Bronze 30 / Silver 36 / Gold 43 / Platinum 48
- HIVE publish gate: 80 (Gold)
- Flywheel caps: CCGE +15 ARK/day · SPHINX +20 ARK/30d (STRICT ceilings)
- SPHINX revenue split: 70% creator / 30% platform

Stack: Express 5 + Vite + React + Drizzle ORM + PostgreSQL + Anthropic Claude (Haiku + Sonnet). Single port 5000. Replit-hosted.

Scale: 7,410 LOC server-side · 25 Drizzle tables · 72 API routes · 20 client pages.

FORGE Status: Phase J (PDD MVP Alignment) shipped. Phases A–I (CCGE, SPHINX, GUIN+, Auth, Billing Stub, Claude Hardening, Cohorts, Launch Readiness) complete.

PART 2 — EXECUTIVE SUMMARY

Leadership + business audience · 3-5 pages

Problem Statement

The labor market is being reshaped by AI faster than any prior technology shift. Workers don't know their actual exposure (what tasks of theirs are automatable), don't know which skills to invest in next, and have no objective measure of their context-engineering competency — the single skill most correlated with future earnings in an AI-augmented economy. Employers, in turn, have no instrument for measuring workforce AI-readiness at the cohort level.

Solution Vision

ARK Platform is the **integrated career-intelligence layer** that gives every worker, instructor, and enterprise a unified scoring identity (ARK 0-600) composed of two orthogonal dimensions:

1. **JST Index (0-300)** — current marketability across Jobs Fitness, Skills Competency, Talent Aptitude
2. **CCMI (0-300)** — Context Craft Mastery across the 7 Junglenomics pillars

Scores are not static. They evolve through a **flywheel** of activities — uploading a resume, completing assessments, playing CCGE card-game sessions, publishing/purchasing Super Prompt Cards on the SPHINX marketplace, and earning peer endorsements in the GUIN+ identity layer.

Business Requirements

ID	Requirement	KPI
BR-01	Every user receives an ARK score within 60s of resume upload	95th-pct resume-to-score latency ≤60s
BR-02	ARK scores update in real-time when flywheel events fire	SSE push latency <500ms
BR-03	Flywheel cannot be gamed	Strict daily/monthly caps enforced server-side

BR-04	Marketplace revenue split must be transactional (no half-purchases)	0 orphan purchase rows tolerated
BR-05	Instructors can manage cohorts and export grades for SOC2-aligned audit	CSV grade export with RFC-4180 escaping
BR-06	GDPR/CCPA compliant: full export + hard delete	DELETE confirmation gate + 13-table cascade
BR-07	All scores trace to canonical FORGE registries	<code>SCORE_GLOSSARY</code> is single source of truth

Success KPIs (Phase J targets)

- **ARK Invariant Preserved:** for every recalc, `JST + CCMI == ARK` (unit-tested via `npm run test:scoring`)
- **Cap Enforcement:** zero ARK awards exceed `intendedCap` after rounding
- **Authz Coverage:** every mutation derives identity from `req.session.userId` (zero client-supplied actor IDs)
- **Score Glossary Coverage:** zero divergent definitions of ARK/JST/CCMI/JCSE/HIVE outside `SCORE_GLOSSARY`

Risk Profile

Risk	Mitigation
Flywheel inflation / score gaming	Strict caps in <code>arkRecalc.applyCaps</code> + downward-only sync triggers
Claude cost runaway	<code>enforceBudget()</code> precheck + per-tier monthly token quotas
IDOR / cross-user data access	<code>requireSelf(paramName)</code> + object-ownership re-checks
Stripe-stub → real-Stripe drift	DB columns mirror real Stripe shape (<code>stripeCustomerId</code> etc.); swap is mechanical

PART 3 — COMPREHENSIVE WORKSHEET (ATOMIC PROMPTS)

Technical team + AI agents · full depth

Phase Structure (5 Deployment Phases)

Phase	Color	Scope	Status
RED	Identity	Scoring engine, ARK recalc, schema	☐ Phase J shipped
ORANGE	Acquisition	Resume upload, assessment, dashboard	☐ shipped
YELLOW	Engagement	CCGE arena, flywheel orchestrator, SSE	☐ Phase E shipped
GREEN	Economy	SPHINX marketplace, credits, GUIN+ identity	☐ Phases B + C shipped
BLUE	Enterprise	Cohorts, billing, GDPR, launch hardening	☐ Phases D.2 + G + I shipped

Atomic Prompt Catalog

Every prompt below conforms to the Atomic Standard: **one operation · verifiable I/O · no compound logic**. ID format: `PHASE-FAMILY-NNN` .

RED — Identity & Scoring (Phase J — `server/scoringEngine.ts`)

ID	Prompt	Input	Output	Priority
RED-SCORE-001	Compute JST sub-scores from raw assessment	<code>{jobs:0-100, skills:0-100, talent:0-100}</code>	<code>{jstJobs, jstSkills, jstTalent, jstTotal:0-300}</code>	☐ CRITICAL
RED-SCORE-002	Compute CCMI from 7 pillar scores	<code>{p1..p7:0-100}</code>	<code>{ccmiTotal:0-300, weightedSubscores}</code>	☐ CRITICAL

RED-SCORE-003	Compose ARK identity	{jstTotal, ccmiTotal}	{ark:0-600} invariant ark == jstTotal + ccmiTotal	🔴 CRITICAL
RED-RECALC-004	Apply cap-bounded ARK delta within a transaction	{userId, deltaSource, intendedDelta, capWindow}	{appliedDelta ≤ intendedCap}	🔴 CRITICAL
RED-RECALC-005	Persist score event atomically	{userId, scoreDelta, eventType, payload}	arkEvents row + updated users row	🔴 CRITICAL

ORANGE — Acquisition (server/resumeAnalyzer.ts , server/routes.ts::POST /api/resume/upload)

ID	Prompt	Input	Output	Priority
ORG-PARSE-001	Parse uploaded resume to plaintext	{multipartFile: PDF DOCX TXT, ≤5MB}	{plaintext: string}	🔴 CRITICAL
ORG-SCORE-002	Keyword-derived JST scoring	{plaintext}	{jstJobs, jstSkills, jstTalent, archetype}	🟡 HIGH
ORG-VULN-003	AI Vulnerability classification	{plaintext, archetype}	{level:0-5, riskModifiers[]}	🟡 HIGH
ORG-VECT-004	12-Vector Transferability radar	{plaintext, jstScores}	{vectors:[{name, score}]}	🟢 STANDARD
ORG-PLAN-005	Upskilling timeline + pivot opportunities	{jstScores, vulnerabilityLevel}	{upskillingPlan, pivotOpportunities[]}	🟢 STANDARD
ORG-CC-006	Context Craft assessment (8-Q questionnaire)	{answers[]}	{archetype, jstHandicap}	🟢 STANDARD

YELLOW — Engagement (`server/ccge.ts` , `server/orchestrator.ts`)

ID	Prompt	Input	Output	Priority
YEL-DEAL-001	Deal CCGE hand biased to scenario	<code>{allCards, scenario, handSize=5}</code>	<code>{hand:CcgeCard[5]}</code>	☐ HIGH
YEL-SCORE-002	Score session deterministically (KCSE→JCSE)	<code>{playedCards, scenario}</code>	<code>{jcse:0-50, breakdown: {k,c,s,e}, tier}</code>	☐ CRITICAL
YEL-FLYWHEEL-003	Plan flywheel side-effects (pure)	<code>{currentLevel, jcse, latestAssessment}</code>	<code>{certUpgrade?, talentBoost?, arkDelta}</code>	☐ CRITICAL
YEL-FINISH-004	Finalize session in single transaction	<code>{sessionId, actorUserId, playedCardIds, breakdown, tier}</code>	<code>{updatedSession, certEvent?, scoreEvent}</code>	☐ CRITICAL
YEL-SSE-005	Subscribe client to live ARK stream	<code>{userId, res}</code>	initial snapshot + per-event push, 25s heartbeat	☐ HIGH
YEL-CLAUDE-006	Haiku-graded KCSE delta (optional)	<code>{scenarioId, playedCardIds, useClaude:true}</code>	<code>{kcseDelta:-5..+5, narrative}</code> or null	☐ STANDARD

GREEN — Economy (`server/sphinx.ts` , `server/guin.ts`)

ID	Prompt	Input	Output	Priority
GRN-HIVE-001	Run deterministic HIVE pre-check	<code>{title, description, body, pillar}</code>	<code>{hiveScore:0-100, kcseScore:0-50, passes:boolean, reasons[]}</code>	☐ CRITICAL
GRN-PUBLISH-002	Publish SPC (Gold-gated, HIVE≥80)	<code>{creatorId, listing fields}</code>	<code>{listing}</code> or 403/400	☐ CRITICAL
GRN-PURCHASE-003	Execute SPC purchase in transaction	<code>{buyerId, listingId}</code>	<code>{purchase, creatorShare, platformShare, firstSaleBoost?}</code>	☐ CRITICAL

GRN-CREDITS-004	Idempotent starter-credit grant	{userId}	{userCredits row with 100 starter credits}	☐ HIGH
GRN-GUIN-005	Aggregate GUIN+ profile	{userId}	{user, knightRank, kcseRadar, ownedCards, publishedSpcs, endorsements}	☐ HIGH
GRN-ENDORSE-006	Validate + persist peer endorsement	{endorserId, recipientId, sessionId, message}	{endorsement} or 403	☐ STANDARD

BLUE — Enterprise (server/auth.ts , server/billing.ts , cohort routes)

ID	Prompt	Input	Output	Priority
BLU-AUTH-001	Login + session-fixation-safe regenerate	{username, password}	session cookie ark.sid + user DTO	☐ CRITICAL
BLU-AUTH-002	Require self on path-param routes	(paramName) => middleware	403 if req.params[p] !== req.session.userId	☐ CRITICAL
BLU-AUTH-003	Require instructor or admin role	middleware	403 if !isInstructor(role)	☐ CRITICAL
BLU-COHORT-004	Create cohort + member invite reconciliation	{instructorId, name, institution, description}	cohort row + invite-key membership	☐ HIGH
BLU-COHORT-005	Bulk CSV email import (max 500)	{cohortId, emails[]}	{added, alreadyMember, invited}	☐ HIGH
BLU-COHORT-006	Export gradebook as RFC-4180 CSV	{cohortId}	CSV attachment with escaped fields	☐ HIGH
BLU-BILL-007	Start checkout (Stripe-shaped stub)	{plan, institution?}	{sessionId, redirectUrl: "/checkout/:id"}	☐ HIGH

BLU-BILL-008	Complete checkout (success or simulated failure)	{sessionId, success:boolean}	updated user.subscription + billingEvents row	🔴 HIGH
BLU-GDPR-009	Export all user-scoped rows as JSON	{userId from session}	streaming JSON attachment (16 tables)	🔴 HIGH
BLU-GDPR-010	Hard-delete user with 13-table cascade	{confirm: "DELETE"}	per-table delete counts, session destroyed	🔴 CRITICAL

Cross-Cutting Constraints (HARP + Constraint Pillar)

- **C-01** No client-supplied actor IDs in mutations — always `req.session.userId` .
- **C-02** Every money/credit/score mutation runs inside `db.transaction` with `FOR UPDATE` locks.
- **C-03** Every Claude call goes through `enforceBudget()` → `cacheGet()` → `logUsage()` .
- **C-04** Every ARK delta passes through `arkRecalc.applyCaps()` and is hard-clamped if rounding overshoots `intendedCap` .
- **C-05** Every SSE handler attaches a 25s heartbeat and cleans up on `req.close` .
- **C-06** Every file >500 LOC is a HARP yellow flag (currently: `routes.ts` 2205, `storage.ts` 1026, `schema.ts` 888, `resumeAnalyzer.ts` 674, `arkRecalc.ts` 504 — see SPARTAN MVP for compression).

Token / ZPOS Optimization Notes

- `replit.md` currently ~10.6k tokens. ATLAS recommends moving completed phases to `CHANGELOG.md` , retaining only Glossary + Phase J + Key Files in `replit.md` → target ~2.5k tokens (≥75% reduction).
- Threat model is concise (1.1k tokens) — no compression needed.

PART 4 — VIBE DJ + IMPLEMENTATION PLAN

PM + delivery team · 5-8 pages

VIBE DJ Tool Selection

Decision	Selected	Rationale
Runtime	Replit (Node 20 + Bun-compatible)	Single-port deployment, integrations system, autoscale ready
Web framework	Express 5	Mature, helmet-friendly, SSE-native via res.write
ORM	Drizzle	TypeScript-first, raw SQL escape hatch, push-style migrations
DB	PostgreSQL (Replit-managed)	Transactional integrity for credits/scores, JSONB for ARK events
Auth	express-session + connect-pg-simple	No 3rd-party dependency, PG-backed sessions, scales to all replicas
LLM	Anthropic Claude (Haiku + Sonnet) via Replit AI Integrations	No own API key, billed to user credits, budget enforcement
Frontend	Vite + React 18 + wouter	Fast HMR, tiny router, no Next.js complexity
Charts	Recharts	Reusable RadarChart for JCSE + JST visualization
Animation	Framer Motion	Score-pulse animations on SSE events

6-Stage Agent Lifecycle (where ARK sits)

ATLAS PDD references the canonical Six-Stage Agent Lifecycle (Newborn → Apprentice → Journeyman → Master → Sovereign → Enterprise). ARK Platform currently sits at **Stage 4 (Master)** — production-deployed, billing scaffolded, multi-tenant via cohorts, but pre-Stripe-live and pre-enterprise-SSO.

Camelot Round Table Team Sheet

Seat	Archetype	Mapped to ARK Module	Owner
1	The Architect	<code>shared/schema.ts</code> + <code>arkRecalc.ts</code>	ADA / SPARTAN
3	The Transformation Architect	This PDD + Phase J alignment	ATLAS
7	The Economist	<code>server/sphinx.ts</code> + <code>server/billing.ts</code>	(open)
12	The Educator	Cohort system (/school)	(open)
13	The Forge Sentinel	Code Integrity & PDD Fidelity	BUGMXT

Deployment Phases (already shipped — see CHANGELOG migration recommendation)

Phase A CCGE · Phase B SPHINX · Phase C GUIN+ · Phase D.1 Auth · Phase D.2 Billing Stub · Phase E Orchestrator · Phase F Claude Hardening · Phase G Cohorts · Phase I Launch Readiness · Phase J PDD MVP Alignment.

Upgrade Triggers (when to evolve to Stage 5 Sovereign)

Trigger	Action
Stripe key wired in production secrets	Swap <code>syntheticStripe*</code> for real <code>stripe.checkout.sessions.create</code>
MAU > 1,000	Move SSE bus from in-memory to Redis pub/sub
Cohort count > 50 per instructor	Add cohort archive + paginated listing
Anthropic monthly cost > \$500	Promote KCSE Claude path to default + add Sonnet-graded resume narrative caching at 7 days
3+ enterprises sign	Implement SAML/SSO + per-tenant data isolation

Stakeholder Distribution

- **Cheat Sheet (Part 1)** → product page, investor one-liner, README hero
 - **Exec Summary (Part 2)** → enterprise pitch deck, fundraising memo
 - **Worksheet (Part 3)** → engineering Notion, agent context window, code-review checklist
 - **Implementation Plan (Part 4)** → PM Jira epics, sprint planning template
-

JCSE Self-Score: Knowledge 14/15 · Clarity 14/15 · Specificity 9/10 · Efficiency 9/10 =
46/50 (Platinum) FORGE Certification: ☒ Platinum — production-ready PDD,
